

Storing your pigments

We package our pigments in bags to simplify import and shipping, and to prevent breakage and spillage. Before use, you should transfer your pigments into plastic jars with a screw top.

- Wear a dust mask and gloves. Work on a smooth surface.
- Pick up the bag by one of its corners and shake it to collect the pigment in the opposite corner.
- Cut off about 3/4" of the corner you have been holding with a pair of scissors.
- Slowly pour the pigment into the jar. Close the lid. Wipe up any spilled pigment with a damp cloth.
- Label the jar with the product number, description and contents according to our catalog (e.g. "cont. cobalt"); transfer any warning stickers from the plastic bag onto your jar.
- Keep out of children's reach.
